Adaptive Multi-Horizon Electricity Procurement Using Reinforcement Learning and Macroeconomic News Sentiment

Highlights

- Formulates consumer-side procurement across 14 Iberian spot and forward instruments.
- Tests news-sentiment value beyond physical fundamentals and commodity features.
- Uses rolling Walk-Forward evaluation across changing Iberian market conditions.
- M8-W1 shows 6.32% simulated savings in the isolated 2026 evaluation window.
- Results show an alternative savings–risk profile rather than universal gains.
